

geotopbricks

An R Package for the Distributed Hydrological Model GEOtop

Emanuele Cordano (Rendena100)

github.com/ecor

Giacomo Bertoldi , Elisa Bortoli (EURAC Ecohydro)

github.com/Ecohydro

Who are we?

- ▶ Environmental engineers with hydraulic and hydrological background (more deterministic and physically-based than statics!)
- ▶ Some of us are researcher, other are self-employed and freelancers - www.rendena100.eu .
- ▶ Some of us are author of several R-packages and R enthusiast.
- ▶ Some of us are developers of GEOTop hydrologic models with skills in hydrology and environmental science and also in C/C++, parallel programming, High Performance Computing, etc

Hydrology

Scientific study of the movement, distribution, and quality of water on Earth water cycle, including water resources and environmental watershed sustainability [*Wikipedia*]

Hydrological models

Soil water mass balance equation:

$$\frac{\partial \theta}{\partial t} = \nabla \cdot [K (\nabla(\psi + z_f))] + S + \dots$$

Soil Heat (energy) balance equation:

$$C_s \frac{\partial T_s}{\partial t} = \nabla \cdot [K_t (\nabla T_s)] + \lambda S + \dots$$

GEOtop Hydrological Model

Water and/or energy budgets can be activated (both or only one) by users in function of the specific use case. GEOtop has two setup configurations :

- ▶ **1D**: only vertical fluxes → mass and energy balance at local scale (only in one soil column)
- ▶ **3D**: vertical and lateral fluxes → balances at basin scale

GEOtop Hydrological Model Software Package / Source Code

Core components of GEOtop software packages are:

- ▶ written in C/C++
- ▶ released in 2014 (version 2.0) as free open-source project, a re-engineering process is going to finish (version 3.0);
- ▶ scientifically tested and published;

Source code and documentation are available on GitHub repository: [<http://geotopmodel.github.io/geotop/>].

Water Resources Research

RESEARCH ARTICLE

10.1002/2016WR019191

Key Points:

- Seven hydrologic models were intercompared using three benchmarks of increasing complexity
- Models showed good agreement with respect to various hydrologic responses (storage, discharge, and

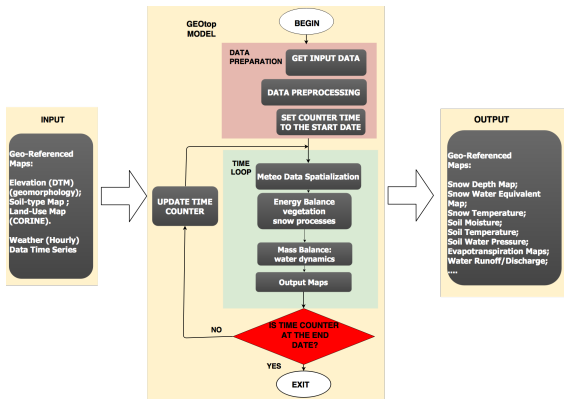

The integrated hydrologic model intercomparison project, IH-MIP2: A second set of benchmark results to diagnose integrated hydrology and feedbacks

GEOtop Hydrological Model Structure

- **Input:** meteo data, elevations, soil parameters, . . .
- **Output:** snow cover, soil temperature, soil moisture, . . .

geotopbricks R package: Why?

- ▶ complexity in input/output/configuration files (“*frontend*”) and data difficult to handle
- ▶ need of user friendly environment for to GEOtop data tidying and data analytics (e.g. *R*)

GEOtop configuration File (geotop.inpts)

A GEOtop simulation is organized in a set of files within a directory containing a **configuration file**, called *geotop.inpts* filled with a keywords system addressing to:

- ▶ simulation

options

(e.g. simulation
period)

InitDateDDMMYYYYhhmm=09/04/2014 18:00

EndDateDDMMYYYYhhmm =01/01/2016 00:00

- ▶ **input files**

(e.g. meteorological time
series)

[...]

MeteoFile = "meteoB2_irr"

PointOutputFile = "tabs/point"

- ▶ **output files**

geotopbricks Technical details

The aim of **geotopbricks** , starting in 2013, is to bring all the data of a GEOtop simlaton into the powerful statistical **R** environment by using the keyword-value syntax of *geotop.inpts*. **geotopbricks** does the following actions:

- ▶ to parse *geotop.inpts* configuration files;
- ▶ to derive from *geotop.inpts*'s keywords the source files of I/O data;
- ▶ to import time series (e.g. precipitation, temperature, soil water content, snow) as *zoo* or *data.frame* objects;
- ▶ to import spatially and spatio-temporal gridded objects as *RasterLayer-class* or *RasterBrick-class* objects (**raster** package)

1D Simulation of soil water budget in an alpine site: two points

Soil water content (SWC) in two points P2 and B2 located in Val Mazia/Match, Malles Venosta/Mals Vinschgau, South Tyrol, Italy [<http://lter.eurac.edu/en>].

B2

Simulation of soil water budget in an alpine site

Here is the directory containing files of B2 point simulation:

```
library(geotopbricks)

## SET GEOTOP SIMULATION DIRECTORY
wpath_B2 <- "resources/simulation/Matsch_B2_Ref_007"
```

Getting simulation input data

Meteorological variable time series are imported and saved as 'meteo' variable (class 'zoo'). This variable is retrieved through the GEOTop keyword **MeteoFile** :

```
tz <- "Etc/GMT-1"
meteo <- get.geotop.inpts.keyword.value(
  "MeteoFile",
  wpath=wpath_B2,
  data.frame=TRUE,
  tz=tz)
class(meteo)
```

```
## [1] "zoo"
```

Getting simulation input data (verify)

Meteorological time series once imported are available in the R environment:

```
head(meteo[12:14,c("Iprec","AirT","Swglobal")])
```

##		Iprec	AirT	Swglobal
##	2009-10-02 11:00:00	0	12.38	396.02
##	2009-10-02 12:00:00	0	13.12	500.07
##	2009-10-02 13:00:00	0	13.96	564.02

```
head(meteo[12:14,c("RelHum","WindSp","WindDir")])
```

Plots of weather variables at B2

Getting results of the simulation at B2

Soil Water Content Profile:

```
tz <- "Etc/GMT-1"
SWC_B2 <- get.geotop.inpts.keyword.value(
  "SoilLiqContentProfileFile",
  wpath = wpath_B2,
  data.frame = TRUE,
  date_field = "Date12.DDMMYYYYhhmm.",
  tz = tz,
  zlayer.formatter = "z%04d"
)
help(get.geotop.inpts.keyword.value) ## for more details!
```

Getting results of the simulation at P2

The same for P2:

```
wpath_P2 <- "resources/simulation/Matsch_P2_Ref_007"  
SWC_P2  <- get.geotop.inpts.keyword.value(  
  "SoilLiqContentProfileFile",  
  wpath = wpath_P2,  
  data.frame = TRUE,  
  date_field = "Date12.DDMMYYYYhhmm.",  
  tz = "Etc/GMT-1",  
  zlayer.formatter = "z%04d")
```

Soil Water Content at P2 and B2

3D Spatially Distributed Distribution: Val Venosta/Vinschgau - Upper Adige River Basin - Alps - I/CH/A

```
wpath_3D <- 'resources/simulation/Vinschgau'
basin <- get.geotop.inpts.keyword.value("LandCoverMapFile",
                                         wpath=wp_3D,raster=TRUE)
basin
```

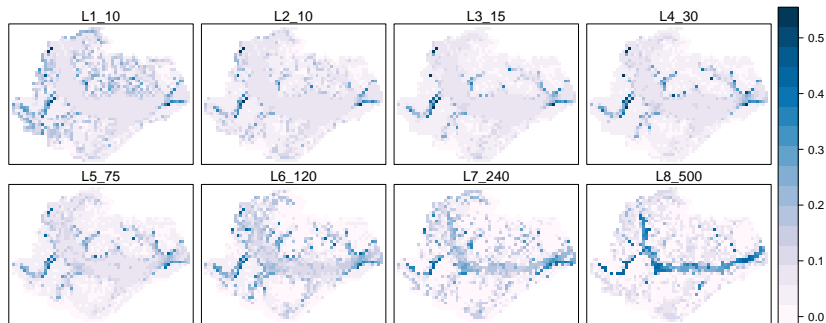

```
## class      : RasterLayer
## dimensions  : 48, 63, 3024 (nrow, ncol, ncell)
## resolution  : 1000, 1000 (x, y)
## extent     : 598000, 661000, 5145000, 5193000 (xmin, xmax, ymin, ymax)
## coord. ref. : +proj=utm +zone=32 +ellps=WGS84 +datum=WGS84 +units=m +no_defs
## data source : in memory
## names       : layer
## values      : 1, 11 (min, max)
```

Input GeoSpatial Map: Elevation and Weather Station

3D Spatially Distributed Simulation (Output Geospatial Map): Soil Water Content

```
help("brickFromOutputSoil3DTensor") ## for more details
```

3D Spatially Distributed Simulation (Output Geospatial Map): Surface Water Discharge at the Outlet

Dicussion

- ▶ Graphical Representation using R , useful for hydrologigists and Reaserchers;
- ▶ Open science : results accessible to a variegate community of professional, scientific or amateur people, *not all hydrologigists are R users but not all R users are hydrologigists!*
- ▶ Reproducible Analysis and Transparency : results can be automatically documented in reports or presentations.
- ▶ Though **geotopbricks** user can intercat between R and GEOtop using R enviroment and GEOtop keywords system, without using the GEOtop simulation structure.

Conclusions and Way Forward

- ▶ Open Source (and not only) Hydrological Model needs powerful and FAIR interfaces to process I/O data;
- ▶ An R package working directly with GEOtop keywords facilitate the development of customized tools for specific GEOtop applications;
- ▶ Collaborations between hydrologists / modelers and R users are encouraged.

F_{indable}

A_{ccessible}

I_{nteroperable}

R_{eusable}

Finally

Aknowledgements to

- ▶ all **GEOtop** developers and users' group, in particular *Matteo Dall'Amico, Stefano Cozzini, Alberto Sartori, Stefano Endrizzi, Samuel Senoner, Riccardo Rigon*, who provided images about GEOtop and hydrologic models for this presentation
- ▶ the community of **R** whose packages allow to analize and visualise GEOtop data.

If intertested? See and follow us on (www.geotop.org) or (<https://cran.r-project.org/package=geotopbricks>)

Thank you for your attention! / Merci pour votre attention!
Find us as **@ecor** (presenter) or **@EURAC-Ecohydro** (co-authors) on *GitHub*.

Addendum

Soil Water Pressure Head at P2 and B2

Example of an Output Data Analytics (Soil Moisture Distribution)

Distribution of daily aggregated soil water content at a 18 cm depth:
Box Plot: Daily Soil Water Content

More details on the **eRum2018** poster.
